

# Can You Make It? Should You Try It? A Look at Aircraft Performance

Most fatal GA Loss of Control accident investigations cite inadequacies in Aeronautical Decision Making and - a subset of ADM - Single-pilot Cockpit Resource Management skills. Occasionally investigations have discovered causal factors resulting from unreasonable expectations of aircraft performance – especially when operating at the edges of the aircraft weight and balance envelope. We'll look at improving a pilot's understanding and calculation of aircraft performance.

**Directions:** Meeting will be held in the hangar adjacent to the FBO.

## A message from the National FAASTeam Manager

The quick brown fox jumped over the lazy dog's back
